

## Congratulations!

You just took an important step to help protect yourself from severe illness, hospitalization, and death from COVID-19. You will also reduce spread to friends, family, and each person you encounter!

## Did you know?

### *Being vaccinated helps protect other people too*

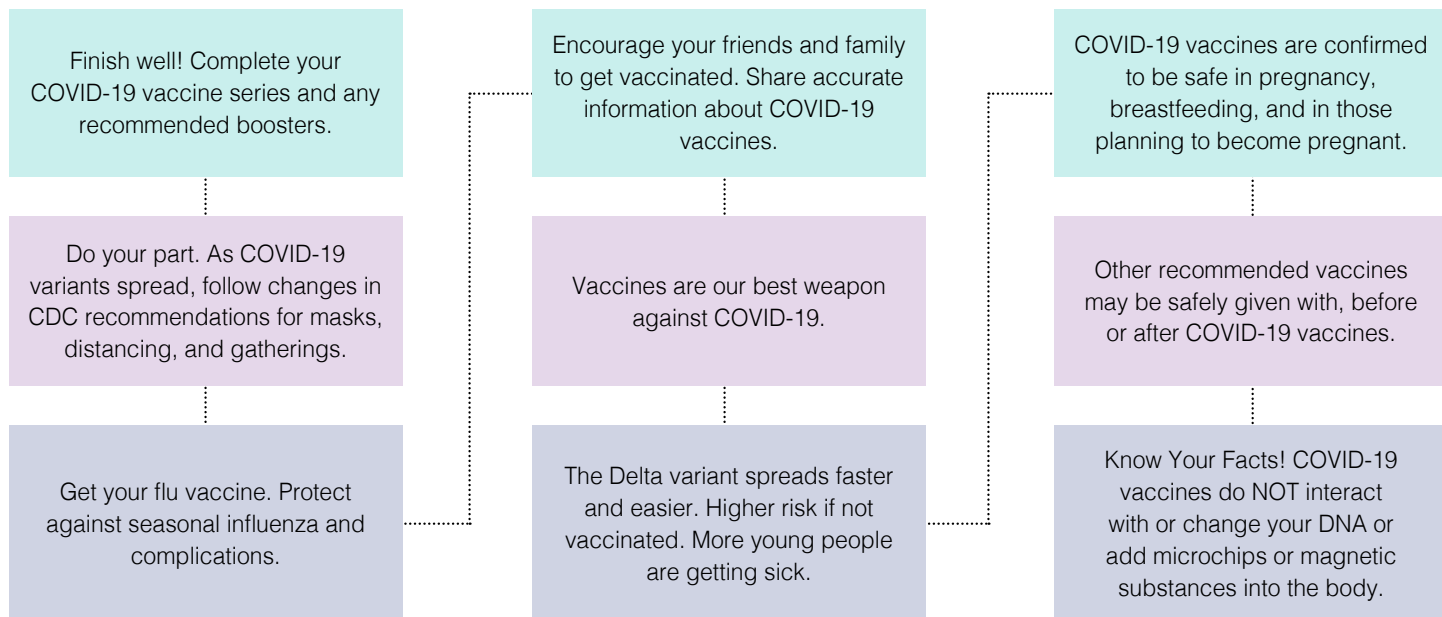

Including people who cannot be immunized (such as children under 12 for COVID-19 and people with certain medical conditions), people whose bodies do not respond to vaccines, and others who are not vaccinated.

### *There is power in numbers!!*

When a large percentage of a community gets vaccinated, **herd immunity** develops and helps slow or stop infections from passing from one person to another. Herd immunity may weaken (or develop slowly) when fewer people get vaccinated.

## What else can you do?

*Talk to your pharmacist if you have any questions or concerns related to your immunizations and to schedule any required vaccinations.*
